About EngineeringNetWorld AG

It all started in early 2000 with the founding of EngineeringNetWorld Internet Services AG, one of our most exciting and ambitious projects.

We brought in experts and project managers from various companies and industries, and integrated their know-how and experiences to develop a project management solution for all project-oriented businesses and organizations.

Why did we do this? On the one hand, we were meeting the increasing demand for quality and efficiency for project management processes so that they could be implemented in a uniform work environment that was user-friendly. On the other, we were following a distinctive trend. Project management is not just an important work method, but also a job description that is becoming increasingly more significant in the modern business world.

Using the Internet as an established and secure technology for cooperation and communication, we developed a universal project management application that supports the different requirements and tasks of project managers, project teams and company management in a central work environment.
